ABOUT ME

Data Scientist and AI Engineer with experience designing and delivering LLM-based solutions, multi-agent architectures, RAG systems, and data pipelines in production on GCP. Background in software engineering (React, TypeScript, Java), bringing a strong focus on architecture, code quality, and continuous delivery to AI projects.

EDUCATION

Master's Degree in Computer Science August 2024 - January 2027 (Expected)
(Emphasis on Artificial Intelligence)
Universidade Federal da Paraíba (UFPB), Brazil

Bachelor's Degree in Data Science and Artificial Intelligence July 2020 - June 2024
Universidade Federal da Paraíba (UFPB), Brazil

TECHNICAL SKILLS

Languages	Python, Java, JavaScript, TypeScript
LLMs & Agents	LLMs, RAG, LangChain, LangGraph, ADK, MCP, A2A, Langfuse, LangSmith
Machine Learning	PyTorch, TensorFlow, Scikit-learn, MLflow
Data & Automation	ETL, n8n, Redis
Cloud & DevOps	GCP, Docker, CI/CD
Front-End	React, React Native, Next.js, Angular, Node.js, Material UI, Storybook, Design Systems

COURSES

Build AI Agents Using Google ADK *Educative*
Building AI agents with Google's Agent Development Kit (ADK), including tool integration and agent orchestration.

Introduction to Google's Agent2Agent (A2A) Protocol *Educative*
Communication and interoperability between AI agents using Google's Agent2Agent (A2A) protocol.

MCP Fundamentals for Building AI Agents *Educative*
Core concepts of the Model Context Protocol (MCP) for connecting AI agents to external tools and data sources.

Automate Workflows with n8n *Educative*
Workflow automation with n8n, integrating APIs, AI models, and RAG pipelines.

Grokking the Generative AI System Design *Educative*
Design of scalable generative AI systems, covering architecture, trade-offs, and production considerations.

MCP: Build Rich-Context AI Apps with Anthropic *DeepLearning.AI*
Applications using the Model Context Protocol (MCP) and fastMCP for modular architectures and agent integration.

AI Agents in LangGraph *DeepLearning.AI*
Creation and orchestration of AI agents using LangGraph and multimodal workflows.

Building Multimodal Search and RAG *DeepLearning.AI*
Multimodal search systems and Retrieval-Augmented Generation (RAG) with Weaviate.

End-to-End Machine Learning: From Idea to Implementation *Udemy*
Complete pipelines with Docker, Hydra, MLflow, and GCP.

Complete Machine Learning & Data Science Bootcamp *Udemy*
Data science and ML fundamentals with Pandas, NumPy, Matplotlib, and TensorFlow.

Ignite React *Rocketseat*
Advanced development with React, Next.js, BaaS, testing, and CI/CD.

Ignite React Native *Rocketseat*
Mobile development with React Native, animations, offline-first, testing, and store publishing.

EXPERIENCE

Sólides April 2026 - Sep 2026
Mid-Level AI Engineer *Brazil*

- Technically led the development of AI solutions for the sales team, defining architecture, refining requirements, supporting the team, and establishing best practices for development and continuous delivery.
- Architected and developed an AI-powered Conversational SDR agent using LLMs, a multi-agent architecture, RAG, and integrations with CRM and messaging channels, automating stages of the sales funnel and supporting lead conversion.
- Built agents using the Agent Development Kit (ADK) and n8n, implementing integrations with APIs, external tools, and automation workflows for the company's various use cases.
- Developed data pipelines in Python covering ingestion, API integration, and data processing, while addressing scalability requirements and rate limiting.
- Structured repositories, CI/CD pipelines, and deployment processes on Google Cloud Platform (GCP), adopting practices for observability and architectural organization.
- Worked with business teams to identify opportunities for applying AI and define technical solutions aligned with the sales process.

Ford Motor Company April 2025 - April 2026
Software Engineer *Brazil*

- Developed intelligent automation and corporate system integration solutions, optimizing workflows and reducing technical report verification time.
- Built an application integrating Auros (E2KS) and Teamcenter via SOAP API, automating report generation and increasing CAD engineer productivity, using Java on the backend and Angular on the frontend.
- Implemented a multimodal application based on Ford's proprietary LLMs for automated 2D drawing verification, leveraging a multi-prompt approach to enhance analysis accuracy.

Synchro - Tax Solutions July 2025 - January 2026
Data Scientist and AI Engineer *Brazil*

- Developed AI solutions for tax automation, applying LLMs and data pipelines to analyze large volumes of tax receipts, focusing on performance and accuracy.
- Conducted comparative benchmarks across data extraction and classification architectures, supporting technical decision-making and guiding new experiments.
- Automated and maintained n8n workflows integrating AI models and autonomous agents, improving operational efficiency and scalability through Docker-based execution.

International Cooperation Monitoring System December 2024 - September 2025
Data Scientist *Brazil*

- Developed a solution for extraction and analysis of public data from Paraíba's Official Gazette, applying web scraping, NLP, and ETL.

- Created automated pipelines with n8n and integrated LLMs/vLLMs in a RAG (Retrieval-Augmented Generation) architecture.
- Applied multimodal models for OCR, such as Llama-Cloud, Qwen, and MinerU, for extraction and interpretation of digitized documents.
- Conducted experiments with vision and language models, expanding the system's analytical capabilities and supporting public data governance.

Wisecare Tecnologia LTDA December 2021 - April 2025
Front-End Developer *Brazil*

- Developed and evolved web systems for the healthcare sector, collaborating with backend, design, and QA teams.
- Implemented complex integrations with React, TypeScript, and DDD architecture, creating responsive interfaces with Material UI and styled-components.
- Led codebase restructuring, creating a Design System documented with Storybook and migrating the project to Next.js.
- Performed code review, pair programming, refactoring, and automated testing integration, ensuring product quality and stability.

CPQD July 2023 - July 2024
Machine Learning Intern *Brazil*

- Collaborated on a Machine Learning platform for debt collection strategy optimization, performing exploratory data analysis, feature engineering, and dataset preparation for predictive models.
- Participated in an NLP project evaluating LLMs for Question & Answer (Q&A) tasks and implementing fine-tuning techniques in Portuguese with PyTorch and TensorFlow, aiming for greater accuracy and computational efficiency.

Autono Dev August 2021 - December 2023
Web/Mobile Front-End Developer *Brazil*

- Developed complete applications with React Native (CLI and Expo), from interface design to REST API integration.
- Implemented Design Systems, performed performance optimizations with React Hooks and Context API, and developed unit and integration tests.
- Worked with CI/CD, Android/iOS build configuration, and error monitoring using Sentry.
- Participated in backend technical decisions and business rule integration, ensuring a clean, scalable, and maintainable architecture.

Netfans LTDA August 2021 - August 2022
Front-End Developer *Brazil*

- Developed an immersive web application to simulate online audiences, focusing on audiovisual experience and interactivity.
- Worked on all stages of the software development lifecycle, from requirements refinement to implementation and maintenance.
- Contributed to architecture decisions and user interface definition in collaboration with project leaders.

Paraíba Humana Inteligente August 2021 - March 2022
Front-End Developer *Brazil*

- Worked on a social information registration and management system, contributing to backlog definition and technical refinements.
- Participated in architecture decisions, task estimation, and development support, improving efficiency and user experience.
